

Non-Destructive Concrete and Pavement Evaluations

GeoView, Inc. is a full-service, geophysical firm serving the United States and Caribbean. GeoView has performed over 4,500 geophysical investigations. Hundreds of these projects have been performed as part of Concrete/Pavement studies.

Services Offered

GeoView provides non-destructive, Geophysical Services which can rapidly and accurately evaluate concrete slabs and pavement. These services include:

- 2 and 3-Dimensional Ground Penetrating Radar (GPR)
- Electromagnetics (EM)
- Acoustic Concrete Tester (ACT)

Final results can often be provided in "real time" allowing features of interest to be identified and marked during the site survey or in complete final reports with figures in AutoCAD or ArcView formats.

Typical Projects

- Confirming presence and design of rebar reinforcing
- Designating post tension cables prior to coring
- Determining thickness of concrete slabs to an accuracy of 0.25 to 0.5 inches (up to 30 inches)
- Identifying near-surface voids underneath concrete slabs
- Identifying areas of delamination or spalling
- Identifying areas of rebar deterioration
- Designating conduits or utilities either within or directly below slabs
- Evaluating the thickness of asphalt pavement and associated sub-base materials
