

GEOPHYSICAL SURVEYS FOR ENVIRONMENTAL SITE INVESTIGATIONS

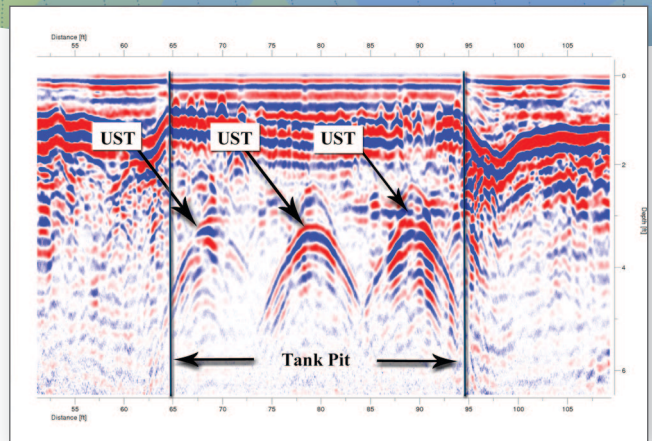

SERVICES OFFERED

GeoView offers several methods that can rapidly and accurately assess environmental conditions at a site. These methods include:

- ✓ Ground Penetrating Radar (GPR)
- ✓ Electromagnetics (FDEM and TDEM)
- ✓ Magnetometry

Studies can be performed with integrated GPS technology.

Final results can often be provided in "real time," allowing features of interest to be identified and marked during the site survey or in complete final reports with figures in AutoCAD or ArcView formats.

TYPICAL TARGETS

- ✓ USTs, drums, or tank pits
- ✓ Horizontal and vertical extent of buried metallic and non-metallic debris
- ✓ Underground utilities
- ✓ Characterization of site geological conditions including karst
- ✓ Groundwater contaminant plumes
- ✓ UXO
- ✓ Archaeological artifacts
